

ResourCity

share resources
be creative

MAIN APP SCENARIO:

An urban resource collecting system, based on location and time through social sharing. In cities there are many resources that we are not aware of and are not properly utilized. The purpose of the App is to enable us to read the city in a different point view, creatively. Look about the resources that are around us all the time, and the things we can produce from them.

1st SCENARIO:

You walk around in a city, you find a resource you need or inspired by. You take the resource and use it. same could be for searching around you in advance.

2nd Scenario:

You walk around in the city, you find a resource but you don't need it or don't have a place to store it, but you want the public to know about it. You recommend about this resource by adding it to the map, stick notes, or write ideas for uses of this resource. Now other people can see it and take it :) You earn points for sharing.

3rd Scenario:

You have some material or a product you don't need, you add a new resource to the map, with your location (or the place you put it). You earn points.

APP SCREEN EXAMPLES:

(A) Main Page, sources around you, different icons for different types of sources. Your location is shown, you can add a resource at your place.

(B) Simple preview of a resource, allow you to edit or fully view the resource, by clicking on it.

(C) Resource view: allow also to edit (add, pictures, ideas, and notes on ideas), and to share.

(A)

(B)
